4-> Footer

PC Auctions is a web application based on HTML5, JavaScript and CSS. The user interface was implemented using the Bootstrap framework.

In this figure some characteristics common to all pages are highlighted:

- We opted for a "net design" as the example and as discussed with the designer and teacher that suits various screen sizes and is fully optimized for mobile.
- It was decided that links are of no conventional color. They are the contrast between their background and are noticeable by hovering over.
- The common links to the various pages and functions is maintained on all pages to ensure a consistent and easy experience.
- Different sections are distinguished and all well spaced to be easy to tell what is each section.

## 2. Sitemap

### 3. Storyboards

These are the storyboards that represent the act of creating an auction and the act of winning it by another user.
